DETAILED ACTION

Claims 5-8, 10, 15, 16, 21, 22, and 25-27 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend upon another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 11-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification fails to describe the frequency domain and notch as they pertain to the applied signal recited in claims 11-14.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2881

Claims 11-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 11-14 recites the limitation "the frequency domain". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9, 17-20, and 23-24 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Whitehouse et al.

Whitehouse et al. teaches a device and associated method for mass analysis comprising an input for an ion stream (13) and quadrupole elements (110 and 111) which operate as initial mass analyzers, RF traps, and collision cells (Col. 20-22) where the ions are fragmented by repeated excitation any number of desired times to selected ion of a specified m/z ratio to produce a desired daughter ion for analysis in a final mass analyzer (Time Of Flight mass analyzer Fig. 5) via collisional induced dissociation as recited in claims 1-4, 9, 17, 20, 23, and 24.

Art Unit: 2881

Allowable Subject Matter

Claims 18-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to teach or suggest a MS/MSⁿ mass spectrometer system which has a final mass analyzer which is an RF quadrupole mass analyzer. Examiner cites Reinhold et al. (USPN 6,483,109) which does teach this limitation. However, Reinhold et al. does not qualify as usable prior art against the applicant's invention because of its date.
